Dado el sig fragmento de código de c que crea
como \$/el 8.

```
void sig_usr2(int);  
pid_t pid2;
```

```
int main(int argc, char **argv) {
```

```
    int i;
```

```
    pid2 = getpid();
```

```
    pid_t pid;
```

```
    signal(SIGUSR2, sig_usr2); // 8.
```

```
    for(i=0; i<atoi(argv[1]); i++) {
```

```
        pid = fork();
```

```
        if (pid > 0) break;
```

```
    }
```

```
    // if (pid > 0) { while (wait(NULL) > 0); } else {
```

```
        printf("say %d hijo de %d\n", getpid(), getppid());
```

```
        Pause();
```

```
        return 0;
```

```
    }
```

```
void sig_usr2(int s) {
```

```
    // kill(pid, SIGTERM);
```

```
    exit(0); (proceso principal).
```

```
}
```

completar pl que todo finalice

③ los hilos prod y consumidor se ejecutan durante 10 seg.
(prod y cons letras del abecedario)

escribir el código de f-Alarm() y consumidor().

```
#define BUFFER_SIZE 10
```

```
void *productor();
```

```
void *consumidor();
```

```
void f-alarma(int); → valor de salir.
```

```
char buffer [Buffer-size];
```

```
int salir = 0;
```

```
int n = 0;
```

```
pthread_mutex_t sc = PTHREAD_MUTEX_INITIALIZER;
```

```
int main (int argc, char **argv) {
```

```
    signal(SIGALRM, f-alarma);
```

```
    alarm(10);
```

```
    pthread_t p, c;
```

```
    pthread_create (&p, NULL, productor, NULL);
```

```
    " (&c, NULL, consumidor, " );
```

```
    pthread_join (p, NULL);
```

```
    pthread_join (c, NULL);
```

```
    return 0;
```

```
void f-alarma(int s) {
```

```
    salir = 1;
```

```
    pthread_mutex_lock(&sc);
```

```
    printf("salir = %d\n", salir);
```

```
void *Producer () {  
    while (1) {
```

→ !salir.

```
        pthread_mutex_lock(&sc);
```

```
        if (count < BUFFER_SIZE) {
```

```
            buffer[count] = 'x';
```

```
            count++;
```

```
        }
```

```
        pthread_mutex_unlock(&sc);
```

```
    }
```

```
void *consumer () {  
    while (1) {
```

→ !salir

```
        pthread_mutex_lock(&sc);
```

```
        if (count > 0) {
```

```
            printf("consumi: %c/n", buffer[count]);
```

```
            count--;
```

```
        }
```

```
        pthread_mutex_unlock(&sc);
```

```
    }
```

```
}
```
